Ariel Del Rio Viamonte

My experience

Freelance, independent group
Software developer
January 2021 - Currently

I am part of a development team who work for several international clients.

I worked on the creation of the website Criptopagos Cuba (<https://criptopagoscuba.com/>) private platform for sending remittances to Cuba through Bitcoin and other cryptocurrencies. My main functions were the development and maintenance of the backend for the operation with forms and payments through Paypal and Coinbase.

I am also working on the design and development of a mobile wallet application for the operation with various cryptocurrencies and mainly for the B2C Bear currency.

EMPERCAP (Company that provides oil services) Cuba
Analyst and Software Developer
October 2020 - Currently

I worked in the development of management systems for the inventory control of computer and automotive equipment of the company. Support and implementation of existing systems and automation of tasks using scripts to control the creation and storage of database saves and other processes.

XETID (Software development company) Cuba
Intern, Software developer in practice
September 2017 - June 2020

During my internship within the company, I worked and supported the development of different systems such as:

- Library management system
- System to control the performance and consumption of resources in the servers of the Bienestar platform (Electronic Government Project).
- System for planning environmental inspections and technical opinion to entities by CITMA.
